See Figure 1.1 and Figure A.4 for the diagrams.

The derivation uses Equation A.38 and Eq. (A.39).

We compare [1, 2, 3, 4, 5, 6].

This paragraph precedes the first diagram and stays outside its preview.

Figure 1.1: A vector diagram drawn in nested forms.

This paragraph separates the two diagrams and must not be included.

A.5.3 Additional Visualizations

Figure A.4: Two separate panels share this caption.

The following paragraph is not part of the second figure.

Assuming a linear transformation, we obtain:

$$x = \text{alpha } a + (1 - \text{alpha})\, b$$
$$= \text{alpha } x + (1 - \text{alpha})\, y, \qquad \text{(A.38)}$$

$$y = x + z, \qquad \text{(A.39)}$$

This explanation follows the equations and stays out of the crop.
